

We've Been the Buyer. We Know What Actually Works.

Technology companies hire Arcadi Advisory because our team spent decades inside the federal government — including at the CIO and CPO level of Cabinet-level departments — making technology actually work at scale. We know what large, regulated organizations need, how they buy, what breaks in production, and how to talk about technology in the language decision-makers understand. The lessons we learned in government apply wherever the stakes are high: federal and state agencies, financial services, healthcare, energy, and critical infrastructure. Backed by a network of former CIOs, Chief Procurement Officers, budget leaders, and cybersecurity executives, we help you navigate from product to adoption.

WHAT WE DO

Mission-Technology Fit

- Assess whether your product solves a real operational problem
- Map capabilities to funded priorities, not wish lists
- Identify mission owners, budget lines, and timelines
- Honest go/no-go before you invest a year

Stakeholder Translation

- Turn technical capabilities into language leaders act on
- Frame value as mission outcomes, not product features
- Prepare your team for CIO, CFO, and executive meetings
- Bridge the gap that kills most enterprise sales early

Compliance & AI Readiness

- Evaluate your product against regulated IT environments
- AI, cybersecurity, and operational resilience review
- FedRAMP, FISMA, Zero Trust, HIPAA, SOX — what it takes
- Integration: legacy systems, shared services, constraints

Budget & Procurement

- Navigate the budget cycle — what's funded and when
- Match your product to the right procurement vehicles
- Buying behavior from the inside — we signed the contracts
- Cyber and AI budget dynamics and how dollars flow

WHY ARCADI

Operators, Not Analysts

We didn't study enterprise IT — we ran it. \$500M budget, \$8B in governance, 120,000 users, 10 divisions. When we pivoted an entire agency to remote in 72 hours, that wasn't a case study — that was a Tuesday.

Reliability Over Flash

Regulated organizations don't want innovation theater — they need technology that works on day 731, not just day 1. Our approach is grounded in operational resilience, incident preparedness, and what it takes to run technology at scale.

The Translators

Most deals die because technologists can't speak mission and decision-makers can't evaluate technology. We've sat in both chairs. We translate your capabilities into the operational language that moves decisions forward — in government and regulated industry alike.

Institutional Knowledge

Decades of combined experience across Cabinet-level departments, law enforcement, financial services, and critical infrastructure. We know the people, the compliance landscape, and the unwritten rules that determine whether your product finds safe harbor or gets shelved.

HOW WE WORK TOGETHER

Retainer

Ongoing advisory. Regular calls, market monitoring, introductions, and strategic guidance as opportunities develop.

Market Assessment

Deep-dive analysis of your opportunity. Market fit, budget reality, compliance path, competitive landscape, and a go/no-go recommendation.

Engagement Support

Hands-on help with a specific pursuit. Stakeholder mapping, messaging, meeting preparation, and operational positioning.

Expert Consultation

Targeted sessions on specific questions — budget cycles, compliance requirements, procurement vehicles, organizational dynamics.

Our advisory network includes former CIOs, Chief Procurement Officers, budget directors, cybersecurity executives, and AI strategy leaders across government, financial services, healthcare, and critical infrastructure.
